

WALI AHMAD HOTAK

Peshawar, Pakistan · github.com/WaliAhmad-git · [LinkedIn: Wali Ahmad Hotak](#) · Afghan National

PROFESSIONAL SUMMARY

Motivated Computer Science undergraduate (CGPA 3.44/4.0) with hands-on experience in full-stack web development, machine learning, and ethical hacking. Proficient in Python, FastAPI, PostgreSQL, and Vanilla JS, with demonstrated ability to deliver production-grade software under academic constraints. Fluent English communicator with advanced certifications; seeking internship or junior-developer opportunities in cybersecurity, AI/ML, or web development.

EDUCATION

BSc Computer Science (BSCS) — 6th Semester	2023 – 2027
IMSciences (Institute of Management Sciences) · Peshawar, Pakistan	
CGPA: 3.44 / 4.0 · 87 credit hours completed · Section BSCS-B · Session 2023–2027	
English Language Proficiency — Advanced (SDC Diploma)	Completed
Kabul English Language Center (KELC), University Town · Peshawar, Pakistan	
Awarded SDC Diploma in English; intensive academic and professional English training	

PROJECTS & EXPERIENCE

Full-Stack POS System — Makkah Foods	2025
Personal / Freelance Project · Remote	
- Designed and built a 6-module Point-of-Sale system: billing, product management, inventory, staff, reports, and settings. - Backend: Python 3.12 + FastAPI + SQLAlchemy ORM + PostgreSQL 18; Frontend: Vanilla HTML/CSS/JS. - Implemented JWT authentication (HS256), bcrypt password hashing, soft deletes, and role-based access control. - Built 9 RESTful reporting endpoints with pure-JS canvas charts; integrated cron-based automated DB backups. - Deployed and tested on Fedora Linux with systemd service management.	
Seizure Prediction ML Research Project	2025
IMSciences — Machine Learning Course · Peshawar, Pakistan	
- Built EEG-based seizure prediction model across three public datasets (UCI Epileptic Seizure, EEG Brainwave Emotions, EEG Eye State). - Applied SMOTE, undersampling, and class weighting to handle severe class imbalance; best result: Pipeline B + Elastic Net + Class Weighting. - Produced IEEE-format PDF report, 10-slide PPTX, and reproducible Python code (Google Colab). - Managed version control on GitHub (WaliAhmad-git/Seizure-prediction-model).	
Z Avatar — AI Meeting Bot & Note-Taker	2025
Personal Project · Fedora Linux	
- Built <code>ai_student.py</code>: a Google Meet presence bot using Deepgram STT, Gemini API for Q&A; and live note generation, and edge-tts for voice. - Configured PipeWire virtual mic (null-sink + remap-source) and OBS WebSocket for scene switching. - Integrated Gemini Files API with chunked .mp4 uploads for continuous lecture transcription (max 65K output tokens).	
Real Estate AI Search Platform	2025
IMSciences — Database Course Project (Team of 3)	
- Co-developed a "virtual property dealer" app enabling users to search houses, view detailed listings, and contact owners directly. - Fine-tuned a HuggingFace transformer model on property data to power an in-app Q&A; chatbot and filter-based personalized recommendations. - Stack: Python backend with a relational database for listings; Flutter (Dart) frontend for cross-platform mobile UI.	
Personal Portfolio Website	Summer 2026 (active)
Personal Project	

- Building a premium personal portfolio site at waliahmadhotak.vercel.app using Next.js 14 (App Router), Tailwind CSS, Framer Motion, and Matter.js.
- Terminal/security aesthetic with matrix-green accent (#00ff41) on GitHub-dark background; fonts: Space Grotesk, Inter, JetBrains Mono.
- Applied security hardening: CSP headers, rate limiting, Formspree contact protection, and security.txt.

Text-to-Braille Converter

2024

IMSciences — Digital Logic Design Course Project (Team of 6)

- Designed and built a hardware-based text-to-Braille translation device as part of a 6-member team.
- Built the circuit using Arduino, solenoids, wires, and resistors; programmed in the Arduino IDE (C/C++) to drive solenoid actuation.
- Converted text input into physical Braille output character-by-character, demonstrating embedded systems and digital logic integration.

Amirani Store — Online Afghan Clothing Business

2024 – 2026

Entrepreneur / Founder · Peshawar → Belgium (International Shipping)

- Founded and ran Amirani Store, an e-commerce brand selling ready-made and custom-tailored Afghan clothing, before selling the business in early 2026.
- Managed TikTok-driven social media marketing, order fulfilment (~15–20 orders/month at peak), and international shipping logistics to Belgium.

TECHNICAL SKILLS

Languages:	Python, JavaScript (Vanilla), PHP, SQL, Bash, HTML/CSS
Frameworks:	FastAPI, SQLAlchemy 2.0, Pydantic v2, Node.js
Databases:	PostgreSQL, SQLite
ML / AI:	Scikit-learn, NumPy, Pandas, SMOTE, Logistic Regression, SVM, Decision Trees, KNN, Ensemble Methods
Cybersecurity:	nmap, sqlmap, dirb, hping3, Kali Linux (KVM/QEMU), Metasploitable 2 lab
Tools & DevOps:	Git / GitHub, Linux / Fedora, VS Code, Figma, Ollama (local LLM), Playwright, LaTeX / Overleaf, Pandoc, ReportLab
Other:	PipeWire, OBS WebSocket, Gemini API, Deepgram STT, edge-tts, virt-manager / KVM, Next.js 14, Framer Motion, Matter.js

CERTIFICATIONS & LANGUAGE

English: SDC Diploma — Kabul English Language Center (KELC), University Town, Peshawar · Advanced proficiency

Languages: English — Advanced | Pashto — Native | Dari/Farsi — Native

Coursera: Microsoft Word and Microsoft Excel certifications (2023)

Early Freelance: Thumbnail design services on Fiverr (2019) · Amazon Virtual Assistant (2020)

INTERESTS & GOALS

Ethical hacking & cybersecurity · AI/ML research · Linux systems · Entrepreneurship · Boxing & Muay Thai · Chess (Chess.com) · Clash of Clans · Cooking · Non-fiction reading (psychology, influence, strategy)

Long-term goals: Google cybersecurity internship · advanced penetration testing · financial independence through tech entrepreneurship · publish a security-focused Linux distribution (FYP).
